Trans Mode concepts

General Motors Corporation

660 South Boulevard, East Pontiac, Michigan 48053 313/857-5000

TO ALL MOTOR HOME DEALERS

Here is a most valuable selling tool - the GMC TransMode Concept Book.

The GMC TransMode is truly a versatile vehicle, and the Concept Book is designed to show your customers just how versatile it really is. The book clearly illustrates how the Trans-Mode, when properly and professionally upfitted, can be adapted to an infinite number of specific applications.

You will want to use the book in every customer contact. Its pages will help you convince your prospects that the TransMode is the finest possible solution to their particular and unusual needs.

If you have any unusual applications not included in this book, please forward color prints or transparencies to us.

If you want to leave a certain page with a customer so that he can further relish the ideal of owning a TransMode — and to influence him positively as he weighs his buying decision — do so. You can replace the leaf quickly and easily by ordering a duplicate page. Order forms are provided in the book for just such a purpose.

Send order forms to R. A. Brovege Sales Promotion Department GMC Truck & Coach 660 S. Blvd. E Pontiac, Mich. 48053

Approximately every six months the Concept Book will be updated with additional pages describing new and varied TransMode applications. New tabs will also be provided as needed to preface additional application sections.

So use the Concept Book for all its worth. It's your portable exhibit of the TransMode's unlimited adaptability to meet every customer need.

CE Rehm

airport jetney

"Jetney"

The Brubaker Group — Upfitter

This unit is designed to transport 16 to 18 passengers (plus luggage) in smooth, easy comfort. It is an excellent airport limousine for use by hotels, motels, businesses and industrial enterprises. Private clubs also find the Jetney ideal for taking members on trips and for transporting them to major sports events.

hn McCabe converted motor home into funeral vehicle which can carry flowers, deceased, and 24 mourners.

Cortege Coach' Gives Funerals New Look, Low Cost

neisted Pres

AURORA, III. — With the cost of a soaring like the cost of living, a eral director is saving consumers mey by using a converted motor ne to replace the hearse and other ousines in funeral processions.

Since Terry Dieterle introduced eight-wheel, propane-powered, dnight green "Cortege Coach" in vember, he says he has had very v requests for the more conventional proposesion.

"There is no less dignity," he

longer do you have to worry about hurting a family member's feeling by saying, 'Sorry, you will have to ride in the second car,' rather than the first."

The coach has a compartment behind the rear wheels for the casket with space above it for 20 floral arrangements. The rest of the interior, partitioned off from the rear, seats mourners, pallbearers, minister and tuneral director.

Dieterle, owner of Dieterle Memorial Home in Aurora, 45 miles west of Chicago, has used the coach in 100 funerals. Now he plans to open funeral coach dealerships, working with

the Revcon coachbuilders in Fountain Valley, Calif.

"We exhibited our prototype in the Los Angeles area last month and had 20 solid inquiries," Dieterle said. Although "morticians are proba-

Although "morticians are probably the last ones in the world who want to change anything," Dieterle said his idea really doesn't break with tradition.

"In the early 1900s, casket and mourners were sometimes transported in special streetcars in the larger cities. In Europe, where the fuel crunch has been felt longer than

it has here, buses have been con verted for funeral use," he said.

The coach cuts the cost of limou sine drivers, fuel and insurance by 6 percent, Dieterle said.

The cost of a typical small funera service in Chicago now totals \$63, h said. That includes \$60 for a lead car \$125 for a hearse, and \$117 each for a limousine and a flower car, with mile age extra for vehicle.

By comparison, the cost of his cortege coach carrying 18 mourners is \$256, and the propane to operate it costs 72 cents a gallon.

luxury limousine

"Executive Cross-Country Transporter" Taylor Industries — Upfitter

This vehicle is being used by a world-famous pianist to transport himself and his musical group around the country in luxury.

Includes:

"Application Lab" A mobile laboratory for displaying and demonstrating electronic equipment. Reprint Order C-2566-5

When Ekco Products, Inc. came up with a new concept in mass feeding, they didn't want to wait for word to get around.

So they equipped a mobile unit with a complete audio visual system.

Ekco got their story across to hotels, restaurants and other food service operators all over the country.

It's an impressive presentation that reaches executive prospects an individual salesman couldn't reach.

When a new building's being planned, Honeywell needs to show its automated control products to the consulting engineer at the right time.

A day late could be too late. And showing an engineer the entire line out of a catalog could be just plain ineffective.

These showrooms-on-wheels can go right where the decisions are being made, when they're being made. And working demonstrations give prospects a chance to try out all the equipment themselves — from a simple thermostat to a complex alarm system.

"Minimum TransMode"

Modern Engineering — Upfitter

This is a basic unit which can be converted to a great range of commercial, industrial, educational, medical and transportation units.

Includes:

- Interior headliner
- Side wall covering
- Flooring
- Insulation

mobile labs

"Quality Control Lab"

Ashland Petroleum Co. — Upfitter

This unit is a traveling laboratory which analyzes the quality of unleaded gasoline at all service stations in the Ashland marketing area. It is equipped with highly accurate, sophisticated atomic absorption lead-detection units. Manned by technical service engineers, the lab is capable of testing as many as 200 samples of unleaded fuel a day.

"Ecololab"

Wolf Coach Inc. — Upfitters

Built to be a mobile laser optics lab for M.I.T., Ecololab is used as part of a new system for air pollution measurement utilizing a laser beam. A unique feature is a 3' x 4' optical table which must be completely isolated from the van when in use, so as not to distrub very precise adjustment of the laser beam. This is accomplished by extending telescoping legs through the floor to the ground. Using GMC's air suspension system, it is then possible to lower the vehicle floor so that the table is resting on the ground, with no part of it touching the vehicle.

A laser is mounted on the table and projects a beam via mirrors out of the rotating turret on the van roof. This beam is directed at a reflecting target one kilometer away. The altered characteristics of the reflected beam are then analyzed to determine pollution levels.

The principal advantage of this system is that it permits accurate measurement of average pollution through a large body of air. It is also faster and can monitor continuously over a prolonged period automatically.

M.I.T. selected the GMC TransMode shell for several reasons:

- 1. Its low floor permits shorter table legs and greater table stability.
- 2. Its low center of gravity gives better handling.
- Its smooth ride gives better protection for the delicate optical and electronic equipment.
- 4. Its air suspension not only permits easy lowering of the 500 lb. table to the ground, it also permits table leveling while doing so.

Before putting new types of cables into service or adding new services to existing cables, Bell Telephone Laboratories conducts field trails to be sure performance objectives are met.

Many such field trails require testing with sensitive test equipment. But moving sophisticated electronic test instruments from site to site can be expensive, time-consuming job.

With this Commercial Traveler equipped as a mobile lab, it's relatively easy. Bell Technicians can drive it to any location, stay there long enough to get the readings they need, and move on to the next test point.

It is easy to adapt a Motor Home for use as a traveling laboratory complete with built in equipment, special refrigeration, and custom designed lighting.

mobile offices

"Mr. Realtor"

H. B. Stubbs Company — Upfitter

This unit is designed to take the office to the customer where business can be transacted in comfort and privacy.

Includes:

- Partitions behind driver and passenger seat for privacy.
- Magazine and storage cabinets
- Upholstered sofa.
- Two swivel barrel chairs.
- Folding table.
- Steel filing cabinets.
- Wardrobe closet.
- Refrigerator.
- Typewriter desk.
- Secretary desk and chair.
- 6,000-watt generator.
- 62-lb. LPG tank.
- 30,000-BTU furnace.
- 110-Volt electrical outlets.

Eastman Kodak's microfilm retrieval systems can make things easier for anybody who keeps records on paper. So their market extends to every business — large and small — in the country.

The trouble is, it would be impossible to bring many of these prospects into a district sales office for a demonstration.

So a Kodak salesman now drops in on them with a demonstration set up in one of their mobile units.

Prospects get to see the equipment in action, and a point-of-sale film that dramatizes the time and money it saves.

The business of the Chicago Tribune's "Action Express" column is people and their problems. It hears from more than 5,000 persons a week. Many of them make a point of dropping in on the Tribune's mobile city desk as it cruises around Chicagoland.

Equipped by the Chicago Tribune for complete communication, the mobile news unit has a 2-way radio, telephone, CB and police radio, tape recorder, desk, chairs and typewriters. (Plus niceties like air-conditioning to keep everybody who works there happy.)

And when a major news event breaks, the Action Express unit can cover it right on the spot, then radio the story back to the Trib's newsroom.

It's a great way to gather news and help people. And what's more, it draws a "Tribune Crowd" of interested Chicagoans wherever it goes.

mobile classrooms

MOBILE ÇLASSROOMS
